2

One person, one genotype

DNA data

One or two allele peaks at a locus

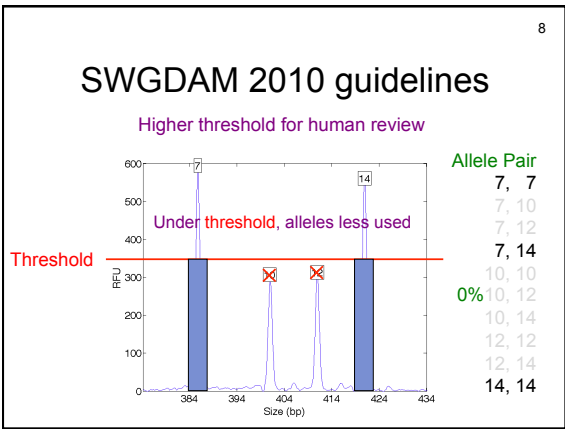

SWGDM 2010 guidelines

3.2.2. If a stochastic threshold based on peak height is not used in the evaluation of DNA typing results, the laboratory must establish alternative criteria (e.g., quantitation values or use of a probabilistic genotype approach) for addressing potential stochastic amplification. The criteria must be supported by empirical data and internal validation and must be documented in the standard operating procedures.

Use TrueAllele® Casework for DNA mixture statistics

TrueAllele reinterpretation

The Washington Post

Virginia reevaluates DNA evidence in 375 cases

July 16, 2011

“Mixture cases are their own little nightmare,” says William Vosburgh, director of the D.C. police’s crime lab. “It gets really tricky in a hurry.”

“If you show 10 colleagues a mixture, you will probably end up with 10 different answers”
Dr. Peter Gill, Human Identification E-Symposium, 2005

Report mixture statistics

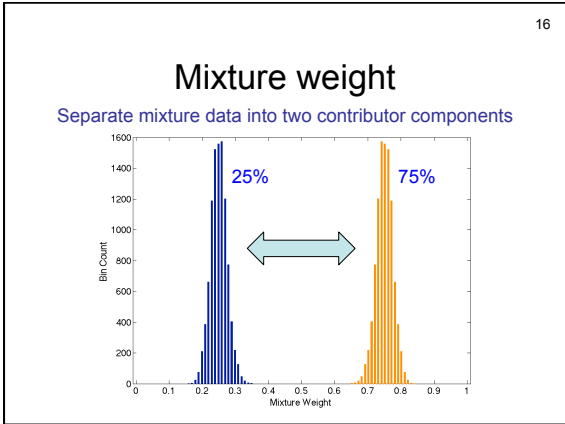

- 72 criminal cases
- 92 evidence items
- 111 genotype comparisons

Criminal offense

- 18 homicide
- 12 robbery
- 6 sexual assault
- 20 weapon

DNA mixture distribution

18

Sensitivity

The extent to which interpretation identifies the correct person

True DNA mixture inclusions

101 reported genotype matches
82 with DNA statistic over a million

TrueAllele sensitivity

Specificity

The extent to which interpretation does not misidentify the wrong person

True exclusions, without false inclusions

101 matching genotypes x 10,000 random references
x 3 ethnic populations,
for over 1,000,000 nonmatching comparisons

TrueAllele specificity

False positives

in over 1,000,000 comparisons per group

Tail distribution	Black	Caucasian	Hispanic
0	39	32	29
1	8	11	9
2	2	1	1
3	0	0	1
log(LR) > 0	49	44	40

false positive rate is under 1 in 20,000 (0.005%)
for LR > 100, rate is 1 in 1,000,000 (0.0001)%

Reproducibility

The extent to which interpretation gives the same answer to the same question

MCMC computing has sampling variation

duplicate computer runs
on 101 matching genotypes
measure log(LR) variation

TrueAllele reproducibility

Concordance in two independent computer runs

Comparison

Accuracy

Conservative results

Five matches, TrueAllele less than CPI.
Ten comparisons, no statistical support:

Interpretation Method		Data Observations						
TrueAllele	CPI	mCPI	allele dropout	allele overlap	low peaks	peak imbalance	infeasible mixture	infeasible pattern
-10.64			3	4	1			1
-6.52			4	3	1			1
-5.05			4	3	1	1		1
-4.87				3			1	1
-4.86	3.48		4		1		1	
-3.22	6.04	6.34		2				1
-2.99	4.23		2		1		1	1
-2.18			2		1			1
-1.41	4.08		1		1			1
-0.67	2.95	0.60	1	2	1			

TrueAllele Virginia outcomes

144 cases analyzed
72 case reports – 10 trials

City	Court	Charge	Sentence
Richmond	Federal	Weapon	50 years
Alexandria	Federal	Bank robbery	90 years
Quantico	Military	Rape	3 years
Chesapeake	State	Robbery	26 years
Arlington	State	Molestation	22 years
Richmond	State	Homicide	35 years
Fairfax	State	Abduction	33 years
Norfolk	State	Homicide	8 years
Charlottesville	State	Homicide	15 years
Hampton	State	Home invasion	5 years

TrueAllele today

Invented math & algorithms	20 years
Developed computer systems	15 years
Support users and workflow	10 laboratories
Routinely used in casework	7 crime labs
Validate system reliability	34 studies
Educate the community	50 talks
Train & certify analysts	200 students
Go to court for admissibility	10 rulings
Testify about LR results	50 trials
Educate lawyers and laymen	1,000 people
Make the ideas understandable	500 cases, 37 states

Conclusions

TrueAllele Casework DNA mixture interpretation is:

- A reliable method
 - objective
 - sensitive
 - specific
 - reproducible
 - accurate

TrueAllele computer genotyping is more effective than human review
