CASE HIGHLIGHT

Days before Christmas, a Dropped Gun Becomes TrueAllele Investigative Database's First Courtroom Milestone

Days before Christmas 2024 in Montgomery County Pennsylvania, an off-duty police detective was shopping with his family at Kohl's when two men robbed the store at gunpoint. The robbers fled; one dropped his gun. It was analyzed for DNA.

To the county's database, the gun DNA was just another "unsearchable mixture" that gave no leads. But the county was also using Cybergenetics' advanced [TrueAllele Investigative Database \(TA-ID\)](#).

TA-ID connected the gun and magazine to suspect Zaire Ransom-Nelson. The jury found him guilty of armed robbery. It was TA-ID's first time in court.

Explore how TA-ID finds leads in non-searchable DNA evidence

MEDIA & RESOURCES

New TA-ID Webpage Launch

Could existing inconclusive DNA evidence produce more investigative leads?

The new TA-ID page explains how agencies can use existing DNA data to **identify suspect hits, case-to-case links, evidence connections, and repeat-offender patterns.**

INDUSTRY NEWS

TA-ID Featured on Police1

TA-ID is now reaching investigators through Police1, a widely used law enforcement resource. The article introduces how TA-ID can help agencies revisit inconclusive, mixed, low-level, partial, and previously not-searchable DNA results.
