

TrueAllele® Interpretation of DNA Mixture Evidence

9th International Conference on
Forensic Inference and Statistics
August, 2014
Leiden University, The Netherlands

Mark W Perlin, PhD, MD, PhD
Cybergenetics, Pittsburgh, PA

Cybergenetics © 2003-2014

On the Origin of TrueAllele

1993 @ CMU: stutter deconvolution
American Journal of Human Genetics

1999 @ Cybergenetics: mixture deconvolution
Journal of Forensic Sciences

Scope: STR mixtures, degraded, kinship, database

Data: (respect) use everything, add nothing
Objective: never consider suspect reference
General: same for evidentiary & investigative

Variation Under Domestication

Single source DNA → locus

8
12

Hypothesis: evidence and suspect share a common contributor

Data analysis: simple threshold

peak height
peak size

Variation Under Nature

victim → 8
12

other → 10
13

Hypothesis: evidence and suspect share a common contributor

Data analysis: patterns & variation

victim
other

Struggle for Existence

Likelihood ratio (LR) requires genotype probability

$$LR = \frac{O(H | \text{data})}{O(H)}$$

Bayes theorem + probability + algebra ...

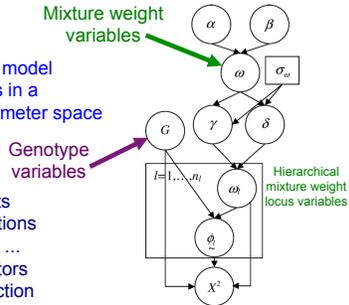

$$= \frac{\sum_x P\{d_x|X=x, \dots\} P\{d_y|Y=x, \dots\} P\{X=x\}}{\sum_{x,y} P\{d_x|X=x, \dots\} P\{d_y|Y=y, \dots\} P\{X=x, Y=y\}}$$

genotype probability: posterior, likelihood & prior

Natural Selection

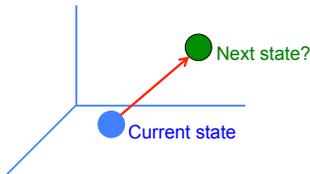

Hierarchical Bayesian model induces a set of forces in a high-dimensional parameter space

- small DNA amounts
- degraded contributions
- $K = 1, 2, 3, 4, 5, 6, \dots$ unknown contributors
- joint likelihood function

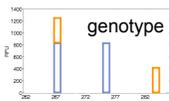

Survival of the Fittest

Markov chain Monte Carlo
Sample from the posterior probability distribution

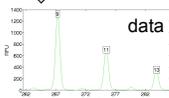

$$\text{Transition probability} = \frac{P\{\text{Next state}\}}{P\{\text{Current state}\}}$$

Laws of Variation

Hierarchy of successive pattern transformations

Variance parameters

Hierarchical (e.g., customized for DNA template or locus)

- Differential degradation
- Mixture weight
- Relative amplification
- PCR stutter
- PCR peak height
- Background noise

Difficulties of the Theory

procedures & rules vs data-driven science

comfort in certainty vs tackling uncertainty

probability and likelihood ratios
can use all the data to
quantify uncertainty

What is the aim of Forensic Science?

comfort vs truth

Miscellaneous Objections

- too complex?
- black box?
- source code?
- insufficient validation?

Validation Studies

Perlin MW, Hornyak J, Sugimoto G, Miller K. TrueAllele® genotype identification on DNA mixtures containing up to five unknown contributors. *Journal of Forensic Sciences*. 2015; *in press*.

TrueAllele Casework on Virginia DNA mixture evidence:
computer and manual interpretation in 72 reported criminal cases.
Perlin MW, Dorner K, Homyak J, Schiermeier-Wood L, Greenspoon S
PLoS ONE (2014) 9(3): e92837

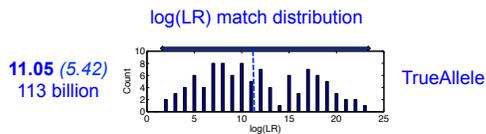

Sensitive

The extent to which interpretation
identifies the correct person

True DNA mixture inclusions

101 reported genotype matches
82 with DNA statistic over a million

TrueAllele Sensitivity

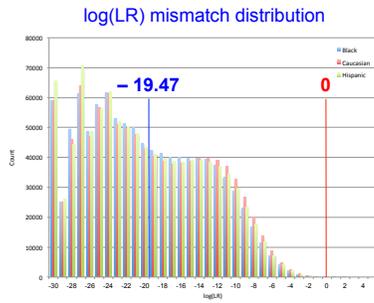

Specific

The extent to which interpretation does
not misidentify the wrong person

True exclusions, without false inclusions

101 matching genotypes x 10,000 random references
x 3 ethnic populations,
for over 1,000,000 nonmatching comparisons

TrueAllele Specificity

Reproducible

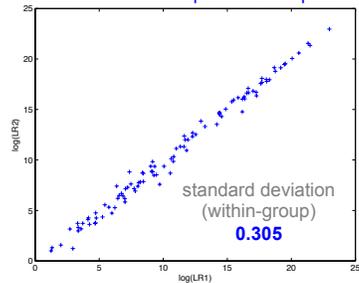

The extent to which interpretation gives the same answer to the same question

MCMC computing has sampling variation

duplicate computer runs
on 101 matching genotypes
measure log(LR) variation

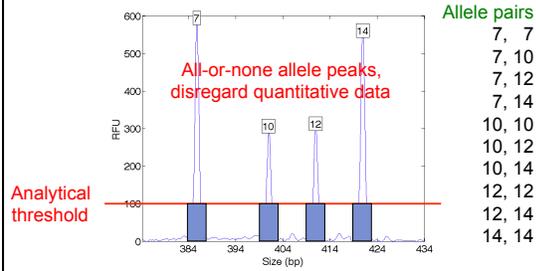

TrueAllele Reproducibility

Concordance in two independent computer runs

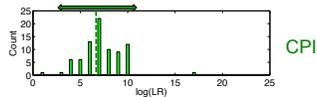

Manual Inclusion Method

Over threshold, peaks become binary allele events

CPI Information

6.83 (2.22)
6.68 million

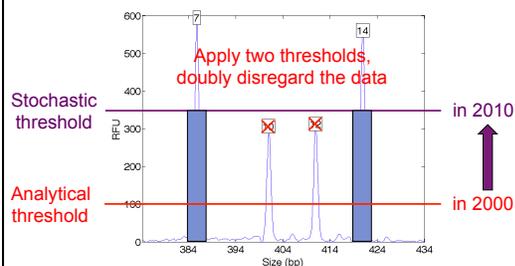

Combined probability of inclusion

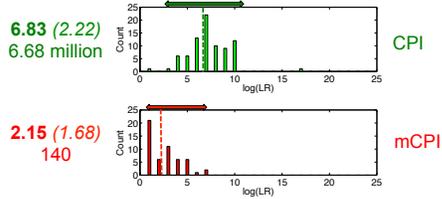

Simplify data, easy procedure,
apply simple formula
 $PI = (p_1 + p_2 + \dots + p_k)^2$

Modified Inclusion Method

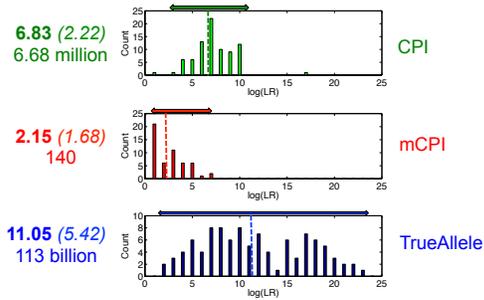

Higher threshold for human review

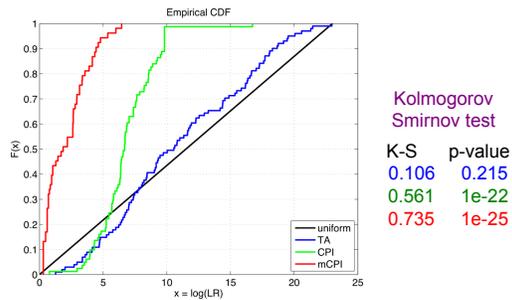

Modified CPI Information

Method Comparison

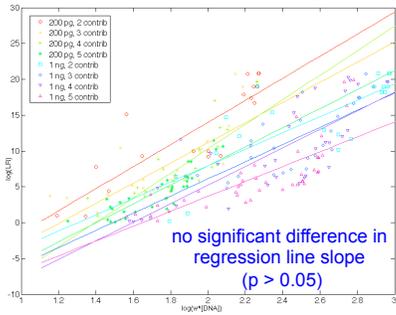

Method Accuracy

TrueAllele® genotype identification on DNA mixtures containing up to five unknown contributors.
Journal of Forensic Sciences. 2015;in press.

Invariant Behavior

Sufficient Contributors

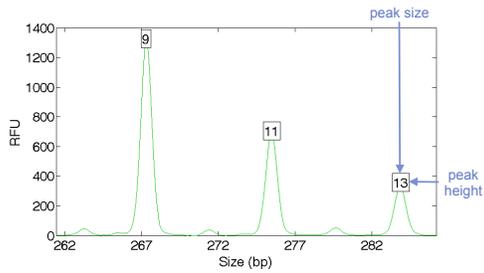

Admissibility Hearings

- California
- Pennsylvania
- Virginia
- United Kingdom
- Australia

Appellate precedent in Pennsylvania

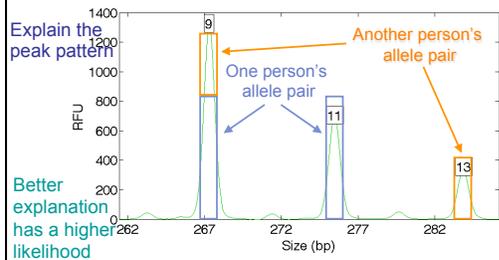

Westchester, NY: Daughter Rape

Quantitative peak heights at locus D16S539

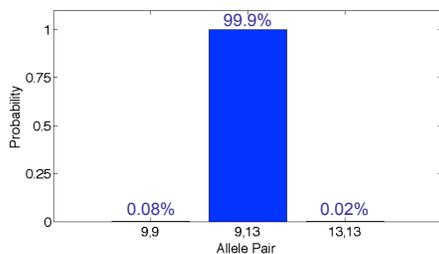

How TrueAllele Thinks

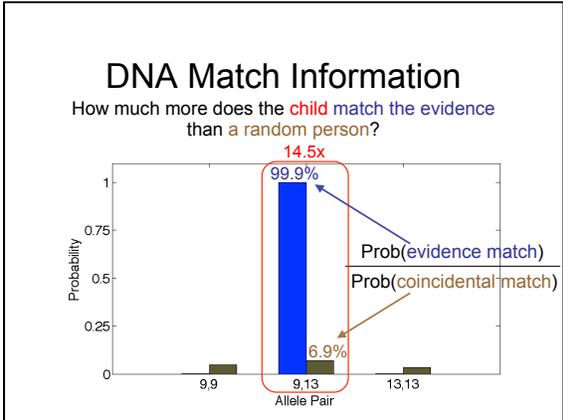

Consider every possible genotype solution

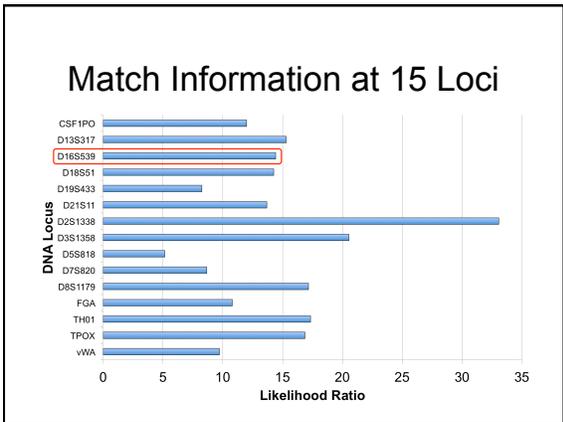

Evidence Genotype

Objective genotype determined solely from the DNA data.
Never sees a comparison reference.

Likelihood Ratio Results

A match between the **blanket** and the **child** is **68 quadrillion** times more probable than coincidence.

A match between the **blanket** and the **father** is **33 quadrillion** times more probable than coincidence.

Father pleaded guilty to rape and was sentenced to seven years in prison.
Young daughters spared further torment.

Other Cases

Mixtures of family members

- child rape
- homicide
- 3 person mixture
- 5 person mixture

Over 200 case reports

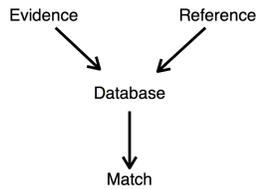

- Many states & countries

On-line in crime labs

- California
- Virginia
- Middle East

Investigative DNA Database

Infer genotypes, and then match with LR

World Trade Center disaster

DNA Mixture Crisis: MIX05

National Institute of Standards and Technology
Two Contributor Mixture Data, Known Victim

Some Differences in Reporting Statistics

LabID	Kits Used	Case1		
		Caucasians	African-Americans	Hispanics
30	ProPlus/Cofiler	1.19E+15	2.13E+14	3.09E+15
34	ProPlus/Cofiler	2.40E+11	7.98E+09	9.80E+10
33	ProPlus/Cofiler	2.94E+08	1.12E+08	1.74E+09
6	ProPlus/Cofiler	40,000,000	3,500,000	280,000,000
9	ProPlus/Cofiler	1.14E+07	1.97E+07	1.54E+08
79	ProPlus/Cofiler	930,000	2,500	1,350,000
16	ProPlus/Cofiler	434,600	31,710	399,100

213 trillion (14)

31 thousand (4)

Remember that these labs are interpreting the same MIX05 electropherograms

DNA Mixture Crisis: MIX13

MIX13 Case 5 Outcomes with Suspect C
(whose genotypes were not present in the mixture)

# Labs	Report Conclusions	Reasons given
6	Exclude Suspect C	detailed genotype checks (D+); TrueAllele negative LR (D+); assumed major/minor and suspects did not fit (D+); 3 labs noted Penta E missing allele 15 (PP16HS)
3	Inconclusive with C only (A & B included)	All these labs used PP16HS
21	Inconclusive for A, B, and C	
70	Include & provide CPI statistics	All over the road...

Range of CPI stats for Caucasian population:
FBI allele frequencies: **1 in 9** to **1 in 344,000**

DNA Mixture Crisis: USA

375 cases/year x 4 years = 1,500 cases
320 M in US / 8 M in VA = 40 factor
1,500 cases x 40 factor = 60,000 inconclusive

1,000 cases/year x 4 years = 4,000 cases
320 M in US / 8 M in NY = 40 factor
4,000 cases x 40 factor = 160,000 inconclusive

+ under reporting of DNA match statistics
DNA evidence data in 100,000 cases
Collected, analyzed & paid for – but unused

The Rule of Science & Law

unworkable rules vs validated science

*"How wonderful it is
that nobody need wait
a single moment
before starting to
improve the world."*
