Research Article

Inclusion probability for DNA mixtures is a subjective one-sided match statistic unrelated to identification information

Dropout & FST

Nature vs. parameter

FST precluded

Judge Dwyer Issues Written Decision in Landmark DNA Case Won by Legal Aid's DNA Unit

WEDNESDAY, JULY 15, 2015

After two and a half years of litigation, including live testimony from 11 scientists, Acting Brooklyn Supreme Court Justice Mark Dwyer decided **not to admit** so-called "lower copy number" or "high-sensitivity" analysis. Lawyers in Legal Aid's DNA Unit litigated the admissibility of LCN and FST evidence in a Frye hearing.

New York v. Nick Hillary

Garrett Phillips (12)
Died from strangulation
October 24, 2011

Oral "Nick" Hillary
Arrested for murder
May 15, 2013

DNA evidence

Clothes 22	shorts long sleeve shirt black long sleeve shirt
Tile 3	material from tile crack hair small black fuzz
Window 3	window and screen wood sill stone sill
Victim 7	oral swab right hand left hand left thumb neck

Cybergenetics

- Pittsburgh, Pennsylvania
- Company founded in 1994
- Extracts information from genetic data
- Medical diagnostics, mass disasters
- DNA mixture analysis

June, 2013
New York State Police sent Cybergenetics
Hillary DNA evidence for free screening
Focus on victim's left hand fingernails

Cybergenetics

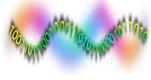

TrueAllele® technology

1994. Solved the PCR stutter problem
1999. Solved the DNA mixture problem
2009. 25th version used in criminal case

- Accurate. 34 validation studies, 7 published
- Objective. Workflow removes human bias
- Accepted. 10 Daubert/Frye challenges
- Transparent. Give math, software (4GB DVD)
- Neutral. Can statistically include or exclude

Objective workflow

(1)
Enter all data

(2)
Calculate statistic

(3)
Math decides

- Keep people out of the process
- Because software is robust
- And eliminate human bias

TrueAllele findings in Hillary

2013. 26 Identifiler tests on left fingernails
 Mixture of 95% victim + 5% other
 No statistical connection to Hillary
 Advised Minifiler for degraded DNA

2014. More lab data on left fingernails
 9 tests using new kit & machine
 NYSP requested TrueAllele analysis
 Again, no connection to Hillary

STRmix™ software

- uses thresholds, dropout
- adds peak heights and some modeling
- limited likelihood explanation of data
- requires calibration of key variables

- solves easy mixtures quite well
- good CPI replacement, better statistics
- retains conventional workflow

It's been a very successful year for ESR in many ways. ... ESR's financial results improved markedly, with a record profit achieved. We also made good progress in executing our strategy, growing international markets for our science services and developing new products. – ESR, 2016 Annual Report, New Zealand

Conventional DNA workflow

(1)
Choose data

(3)
Person decides

(2)
Calculate statistic

- Put people in the process
- To overcome software limits
- And introduce human bias

January. NZ results

STRmix software developers consult for prosecution using version 2.3

Find a match statistic of **ten million**, connecting Phillips' fingernails to Hillary's DNA

Their match statistic lowers to **ten thousand**, when they remove forward stutter peaks

Contributor **under 0.5%**, 1:200

Legal Aid Society of NYC

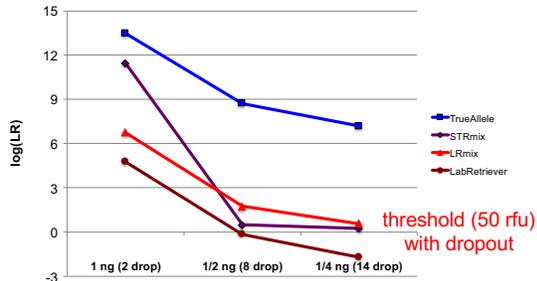

- Contacted Cybergentics
- Sent over STRmix declaration
- Initial discovery not helpful

- Requested additional discovery
- Computer results file important
- **Choose data** to get result

An investigation of software programs using "semi-continuous" and "continuous" methods for complex DNA mixture interpretation.
 Coble M, Myers S, Klaver J, Kloosterman A, Leiden University, The Netherlands,
 9th International Conference on Forensic Inference and Statistics, 2014.

STRmix threshold impact

Simple two person mixture, 10% minor contributor

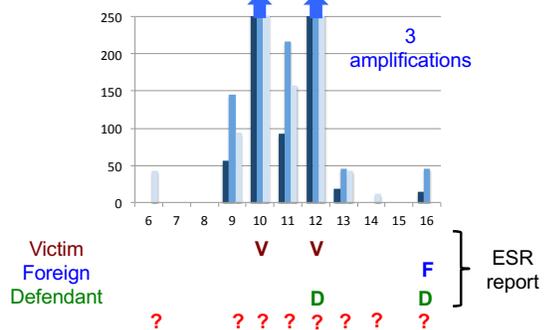

Varying fingernail threshold

RFU	ESR choices	All stutters
80	0	9
70	30	51
60	250	1,660
50	15,500,000	69,200
40	0	0
30	0	0

STRmix calculations done independently

Choosing data at D8

STRmix dropout impact

Getting nowhere fast

Alleles (15):

10 11 12 13 14 15 16 17 18 19 20 21 22 23 24

Allele pairs (100):

10,10 10,11 10,12 ... 10,25
 11,11 11,12 ... 11,25
 ...
 25,25

Too much work and time for the computer:

look at just a few allele data peaks

and merge the rest into "Q"

 50 attributes

Low-level mixture validation

District of Columbia Validation Study, December 2015

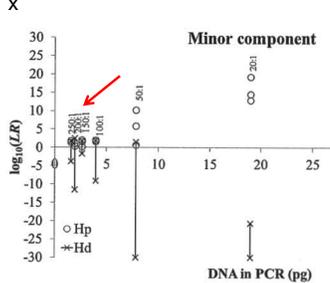

Positive log(LR) inconclusive

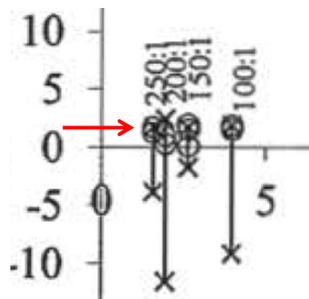

June. NZ validation

True & false positives indistinguishable at low levels

Positive log(LR) inconclusive

July. Frye hearing

Hughes: And subsequent to that, you had no curiosity about what the value would be if you ran it at 30 relative fluorescence units?

Buckleton: No point in running STRmix at 30. We have to go back to GeneMapper and reanalyze the software, the electropherogram, down to 30. And, yes, indeed, I am curious. In fact, I'd like to go to 10.

30 rfu analysis was never reported

Independent defense testing

Access to STRmix™ Software by Defense Legal Teams

- requested by Hillary defense
- agreed to terms & conditions
- software not obtained

The Legal Aid Society (LAS) provided the information presented on this slide, and says it is "100 percent correct." Their testifying expert "agreed" that he was willing to sign and abide by ESR's nondisclosure agreement (NDA), which was under legal review.

ESR says the LAS had not "agreed" because "the Hillary defense did not sign and return the two NDAs required" from the LAS defense experts.

These two views of the word "agreed" are noted on this updated slide. LAS and ESR concur that the NDA was not signed. Eleven days after ESR sent LAS the NDA document, however, software access became a moot issue.

August. STRmix precluded

Dr. Buckleton conceded at the hearing that **no internal validation studies were performed** by the New York State Police crime lab for the use of STRmix on casework samples developed at the lab.

As a result Dr. Buckleton was forced to **pick and choose data** from different "reliable sources" and **input parameters** into the program in such a way that he believed the system would tolerate.

ORDERED that the **defendant's motion to preclude** the prosecution from calling an expert witness to testify on their direct case regarding any conclusion reached by the use of STRmix is **granted** as the prosecution cannot lay a foundation for the introduction of evidence that had not been internally validated.

Out-of-court NZ statements

- Ran data at 30 rfu, but needed more contributors to make STRmix work and get inclusionary statistic
- Acknowledged STRmix need for thresholds, since it does not model baseline noise (3130 v. 3500)
- Pleaded the judge found STRmix reliable, though evidence precluded for other case-specific reasons
- Suggested the main reason to ask for better data (Minifiler) is to support prosecutor's conclusion

September. Hillary acquitted

The New York Times

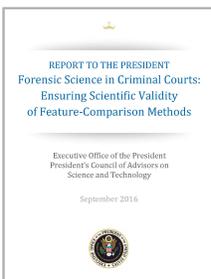

Oral Nicholas Hillary Acquitted in Potsdam Boy's Killing

Future. NZ roadmap

- Demand full discovery
- Test STRmix on case data
- Compare with accurate results
- Identify subjectivity and bias
- Challenge unreliable results
- Cross-examine on deficiencies
- Employ Hillary documents

What PCAST tells us

- 15 years of CPI failure never questioned
- 15 more years of nonsense time to question
- learn how to challenge legal education
- find truth in every case TrueAllele screening
