

# Use of a Database Feature in the TrueAllele® Casework System to Cross Compare DNA Cases

Dr. Nasir Butt, Ph.D.\* and Jeffrey Oblock, B.S.,

Cuyahoga County Medical Examiner's Office  
11001 Cedar Avenue  
Cleveland, Ohio 44106  
(216) 721-5610

---

---

---

---

---

---

---

---

## The History

- Spike in auto thefts in multiple westside suburbs of Cleveland, Ohio in the summer and fall of 2015
- Believed to be committed by the same gang of juveniles
- Most vehicles stolen over night from driveways or from the street
- Vehicles were unlocked or windows smashed
- Steering columns “peeled” or keys left inside vehicle

2

---

---

---

---

---

---

---

---

## The Numbers

- 37 separate incidents/cases submitted for testing
- 6 different jurisdictions
- 161 total evidence samples
  - Swabs from various areas of recovered autos
  - Personal property left behind
- 38 suspect reference samples collected during gang “round up” (72 total references)

THESE ARE BUZAL SWABS COLLECTED FROM SUSPECTS RELATED TO THE MECHANICS HARBOR (15-5033) AND RELATED WEST SIDE CRIME RING (GANG INVEST.

3

---

---

---

---

---

---

---

---

## The Challenge

- Efficiently cross-compare 38 suspect references to each of the 37 cases/100+ evidence samples
  - Manual interpretation done using in-house protocols with RMP/CPI
    - Many man hours of desk work
    - Ignoring profiles/data

4

---

---

---

---

---

---

---

---

## Manual Interpretation

- Threshold – 200RFU cutoff
- Profiles reported as single source and major/minor or indistinguishable mixtures up to 3 contributors
  - >3 is inconclusive due to too many contributors
- Statistical calculations
  - RMP for single source and major profiles
  - CPI for indistinguishable mixtures
- General rules
  - >50% data (alleles) needed for inclusions
  - <50% data inconclusive due to insufficient information

5

---

---

---

---

---

---

---

---

## Manual Interpretation

- ~2 months from initial testing to release of 37 reports
- ~1 additional month for release of 26 supplemental reports for additional suspect submissions
- 11 of the 38 suspects were associated to at least one case (RMP/CPI)
- 4 of the 11 positively associated suspects were connected to more than one case
- 30 evidence samples contained no or insufficient amount of DNA
- 30 profiles were reported as inconclusive due to too many contributors or insufficient information (some minor components also)

6

---

---

---

---

---

---

---

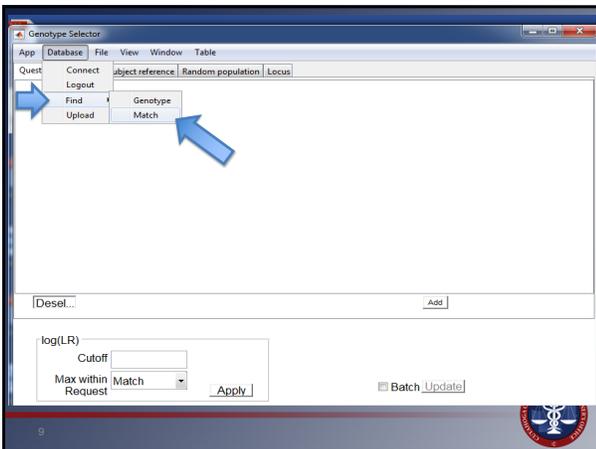

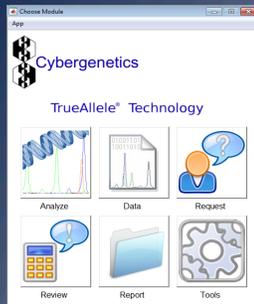

---

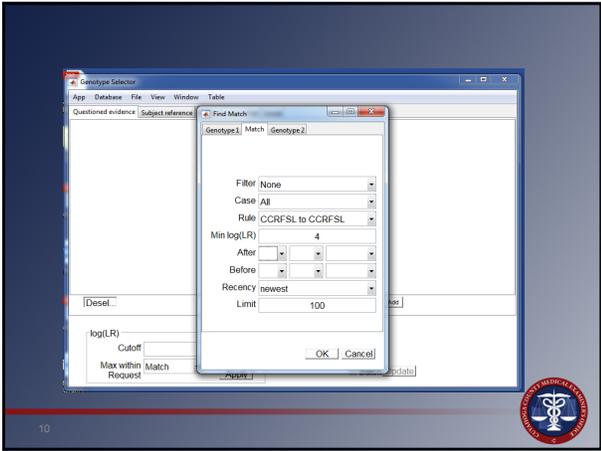

## TrueAllele® Interpretation/Database

- Cuyahoga County Prosecutor's Office made aware of TA Databasing capabilities
- Probabilistic Genotyping using TrueAllele® Technology's Databasing Feature was done by Cybergenetics.
- .hid data files sent to Cybergenetics for TA analysis
- All profiles run through TA including those manually deemed inconclusive
  - Low data/3+ contributors
- Database Match Rules: *EVI-EVI, EVI-REF, REF-REF*

---

## The Summary

### Manual

- ~2 month from testing to report release, additional month to release supplemental reports
- 11 of 38 suspects associated to at least one case
- 4 of the 11 suspects connected to multiple cases
- 30 profiles reported as inconclusive
- 12 samples reported as exclusions

### TrueAllele

- ~1 month from data upload/request to preliminary results
- 16 of 38 suspects associated to at least one case
- 8 of the 16 suspects connected to multiple cases
- All 30 profiles with at least one positive association
- Positive match scores for the 12 manual exclusions
