## *Cybergenetics News*

Cybergenetics is excited to announce that Dr. Mark Perlin, founder of Cybergenetics, recently coauthored a significant research paper published in the medical journal *Diagnosis*.

This study explores the innovative use of Bayesian methods applied to medical diagnosis. It underscores the immense potential of combining physician expertise with Bayesian statistics to shape the future of diagnostics.

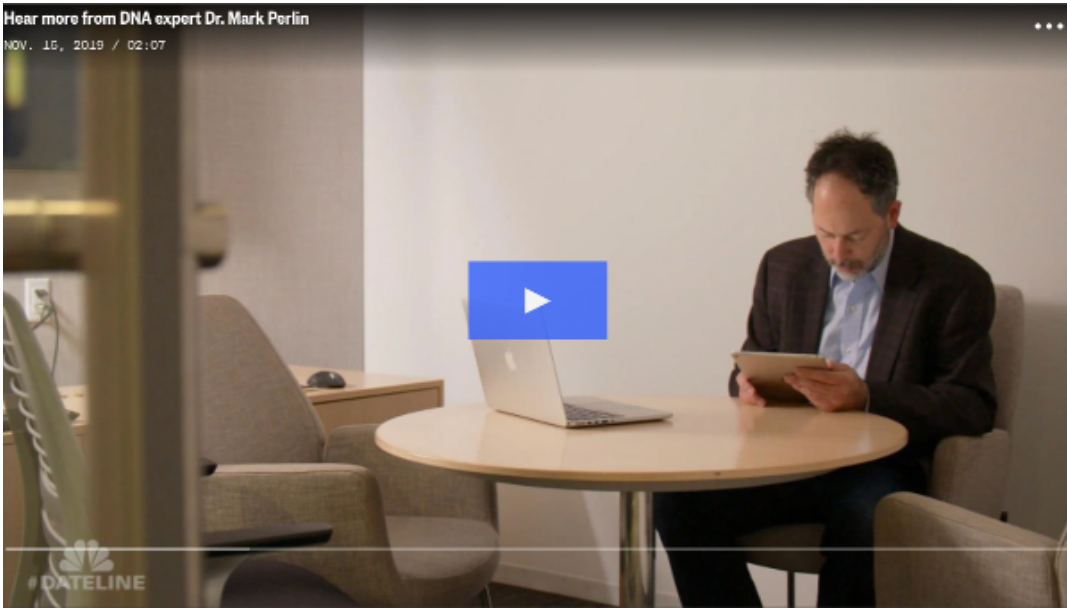

Congratulations Dr. Perlin!

#DATELINE

Dateline's Andrea Canning asked Dr. Perlin, "How satisfying is it that your method went on to become the gold standard for DNA testing?"

"I think we are more gratified that it is having an impact on criminal justice," he answered. "When you know that someone has been in jail for 25 years - and the only reason he is out of jail, and has been exonerated, is your technology."

On the night of April 13, 2006, Blairsville dentist Dr. John Yelenic struggled with a knife-wielding attacker in his southwest Pennsylvania home. Yelenic knew his assailant. The murderer slashed repeatedly, draining the life-

blood from the unarmed dentist. Before exsanguinating on his living room floor, Yelenic reached out to defend himself, scratching his killer's DNA identity under his fingernails.

Five years ago, NBC Dateline reported the story of Dr. Yelenic's murder – why it happened and how it was solved. This was the first time modern probabilistic genotyping evidence was ever used in court. Fifteen years ago, the Yelenic homicide ushered in the modern forensic DNA era of "probabilistic genotyping."

## Conferences

Cybergenetics speaks with hundreds of crime investigators at conferences, conventions, and trade shows about how TrueAllele technology and services can help them solve their toughest cases.

### **DECEMBER**

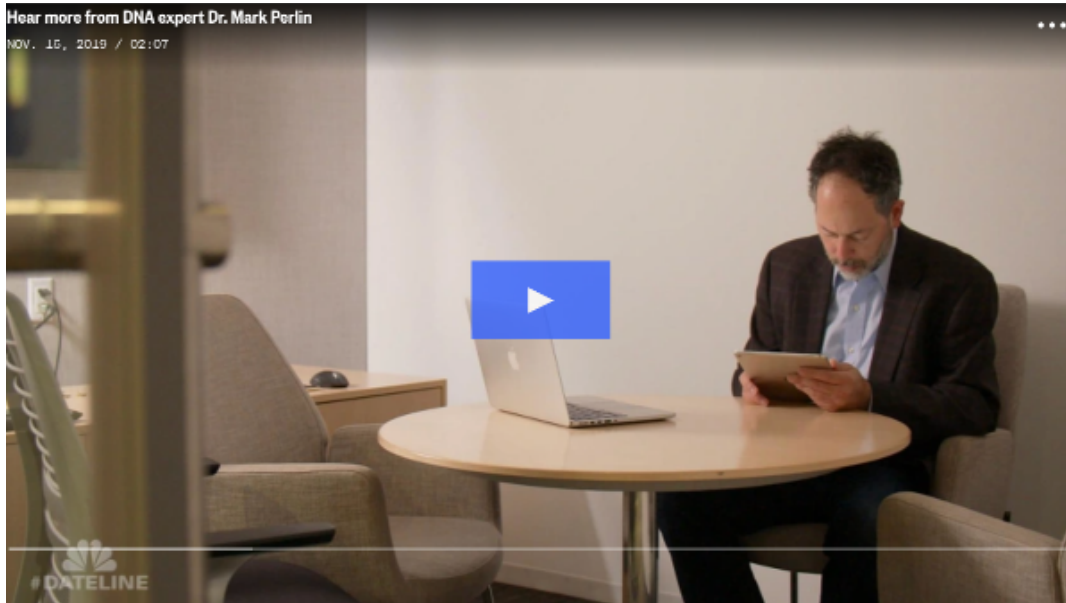

- *IHIA - 2024 Cold Case Conference* (International Homicide Investigator's Association)
  - Location: Horseshoe Bay, TX
  - Dates: December 3-5

Stop by our trade booth to learn how TrueAllele technology can help you solve your most complex DNA cases.
