

SERVICES

DNA interpretation
of crime evidence

Case report
for TrueAllele results

Trial preparation
with DNA science

Expert testimony
by qualified scientists

CASES

• burglary • cold case •
homicide • post-conviction
• serial crime • sexual assault •
weapons crime

FREE SCREENING

Cybergenetics offers a
free TrueAllele screening of
DNA case data. (Turn the page
for more information).

Law Services

Justice demands reliable science. Yet forensic opinions can be partial, biased or wrong. TrueAllele computing overcomes human limitations. The truth-seeking computer gives reliable DNA match results, based on solid science, not subjective opinion. Use all the evidence, and know the answer™.

TrueAllele

TrueAllele Casework (computer interpretation) preserves all the identification information, even with complex DNA. It shows the degree of association between evidence and people.

TrueAllele has provided match statistics on evidence that crime labs could not interpret. Its results have led to confessions, convictions, exonerations and plea agreements.

Benefits

- ✓ **Accurate.** Dozens of scientific validation studies demonstrate that TrueAllele results are reliable.
- ✓ **Fast.** Cybergenetics typically delivers results within a few weeks. Expedited results may be available.
- ✓ **Informative.** TrueAllele's robust statistical analysis can produce match statistics when other methods cannot.
- ✓ **Objective.** Computer automation eliminates human bias. The TrueAllele computer infers information without referring to a suspect.
- ✓ **Productive.** Mixed DNA samples (from 2 or more people) and low template DNA are regularly solved by TrueAllele.

Experience

Cybergenetics provides services to crime labs, defense, police, prosecution and innocence groups. TrueAllele results appear in hundreds of case reports and dozens of trials. Our experts testify in state, federal, military and foreign courts.

FAQs

Types of DNA Samples

The lab said the DNA was “inconclusive” or that there was “insufficient genetic information.” Can TrueAllele® technology help?

Yes. The computer has found information when other methods did not. TrueAllele computing resolves items with multiple contributors, partial profile and degraded DNA.

The suspect(s) and victim are related. Can TrueAllele technology help?

Yes. TrueAllele computing has unmixed father-daughter, brother-brother and other family DNA data into individual profiles.

Does Cybergenetics only work for prosecutors and investigators?

No. Cybergenetics analyzes case data for defenders and innocence groups, as well as prosecutors and investigators. Also, Cybergenetics partners with academics, advocates and labs.

My client claims not to be present on the evidence. Can TrueAllele technology look?

TrueAllele computing is neutral. If a person is connected to the evidence, the computer calculates inclusionary statistics. If a person is not connected to the evidence, it calculates exclusionary statistics.

Submitting a Case

Are the physical evidence items needed for TrueAllele processing?

No. The computer uses the DNA data, which crime labs develop from biological evidence items. Only the electronic data file is needed for TrueAllele processing.

How do I send a case for a free TrueAllele screening?

Contact Cybergenetics. For detailed instructions, visit www.cybgen.com/support/sending_data.shtml.
