

DNA evidence, simplified.

Finding answers in complex DNA mixtures using TrueAllele® technology

We offer free TrueAllele screening on DNA data from:

Serial crime • Homicide

Burglary • Sexual assault

Cold case • Drug crime • Weapons

mixed evidence
from crime scene

crime lab
produces DNA data

TrueAllele computer
unmixes data

TrueAllele expert
testifies in court

Benefits

- ✓ **Effective.** Mixed DNA samples (from 2 to 10 people) and low template DNA are regularly solved by TrueAllele.
- ✓ **Fast.** Cybergenetics typically delivers results within 2-3 weeks. Expedited service is available.
- ✓ **Informative.** TrueAllele finds matches (between evidence and people) when other methods cannot. The technology gets results from “inconclusive” data, leading to confessions, convictions, exonerations and pleas.
- ✓ **Investigative.** For non-suspect cases, TrueAllele separates mixed DNA evidence. The computer provides profiles for database searches or probable cause.
- ✓ **Accepted.** The validated TrueAllele results have been accepted in state, federal, military and foreign courts.

Cybergenetics
TrueAllele DNA interpretation

Frequently asked questions

The lab said the DNA was “inconclusive”. They said there was “insufficient genetic information.” Can TrueAllele® technology help?

Yes. The computer finds information when other methods can't. TrueAllele computing handles multiple contributors, partial profiles and degraded DNA.

I don't have a suspect. Can TrueAllele technology help?

Yes. TrueAllele computing gets information from the evidence. The profiles can be searched in a database like CODIS, or used to provide probable cause.

The suspect and victim are related. Can TrueAllele technology help?

Yes. TrueAllele computing unmixes father-daughter, brother-brother, and other family DNA data.

Are TrueAllele results admissible in court?

Yes. The TrueAllele method has been admitted in state, federal, military and foreign courts. Qualified TrueAllele experts prepare attorneys for testimony.

Are the physical evidence items needed for TrueAllele processing?

No. The computer uses the DNA data, which crime labs develop from biological evidence items. Only electronic data files are needed.

How do I send a case for a free TrueAllele screening?

Contact Cybergenetics.

WHO is Cybergenetics?

For 20 years, Cybergenetics has provided crime labs, attorneys and police with DNA information when other methods failed.

HOW can TrueAllele help?

TrueAllele analysis routinely provides useful results in any type of case, from homicides to property crime, even when lab results are inconclusive.

WHAT does Cybergenetics do?

Cybergenetics specializes in computer DNA interpretation using TrueAllele technology. Its methods are extensively validated and are accepted in court.
